

SUUNTO PM5/360PC CLINOMETER

Reviews:

"Height meter, clinometers and combined height and clinometers"

Suunto PM-5 provides you with a large selection of height meters, clinometers and combined height- and clinometers. Suunto height meters are instruments for measuring the heights, especially the height of trees, with great accuracy and speed. The height meters can also be used to determine the angle of a gradient. Suunto hand-held clinometers are precision instruments used all over the world by surveyors, engineers, cartographers, geologists, miners and architects and many others to measure heights, vertical angles and slopes quickly and easily.
